Supplementary Figure 1

Sequencing of 9 subconed RT-PCR amplicons from individual 5.IL-1 that span the exon 1-2 junction in TGFBR2 mRNA revealed altered splicing in 4. This event results in the skipping of the first 18 nucleotides of exon 2 in the mature mRNA. RT-PCR was performed using primers 5'-TATCGCCAGCAGATCCAC-3' and 5'-GCTCGCTGAACTCCATGACG-3'.
